

- $R : \text{Locations} \rightarrow \text{VC}$. $R_x = R(x)$. $R_x(t)$ represents the value of thread t 's logical clock when it last read from x . For a location x and thread t : $R_x(t) = 0$ means that t has never read from x . Otherwise $R_x(t)$ was t 's logical clock last time t read from x .
- $V : \text{Locations} \rightarrow \text{VC}$. Similar to R .
