

A tape over $\Sigma = \{\sqcup, 0, 1\}$ **codes a list of numbers** if precisely two cells contain **0** and the only cells containing **1** occur between these. Such tapes look like:

$$\underbrace{\cdot \cdot \cdot \sqcup}_{\text{all } \sqcup\text{'s}} \mathbf{0} \underbrace{1 \cdot \cdot \cdot 1}_{n_1} \sqcup \underbrace{1 \cdot \cdot \cdot 1}_{n_2} \sqcup \cdots \sqcup \underbrace{1 \cdot \cdot \cdot 1}_{n_k} \mathbf{0} \underbrace{\sqcup \cdot \cdot \cdot \cdot}_{\text{all } \sqcup\text{'s}}$$

which corresponds to the list $[n_1, n_2, \dots, n_k]$.

Note the blank spaces: $\sqcup$!
